

Name: Portales WWTP

Location: Portales, NM

Market: Municipal Wastewater

Application: Head works to WWTP

Size: 12' Dia. x 20' Deep

PROJECT PROFILE

Municipal Wastewater Triplex Wet Well

This wet well was unique in the use of WEMCO pumps with pre-rotational bases. This station utilized a set of duplex pumps for redundancy, with a third pump for an over-ride pump. Due to the size of the pre-rotational basins and the weight of the base elbows, this was an exceptionally challenging custom built wet well. The pipe system utilized 8" DR 11 HOPE pipe, with 316 S.S. rails and hardware. The wet well was designed to have a 12" top concrete slab, with access covers to finish grade, using safety grates for fall protection.

Why work with us?

- ☒ Turnkey Fiberglass Prepackaged Systems
- ☒ Reduced Construction Costs
- ☒ On Time Delivery
- ☒ Superior Quality
